TAKE YOUR PLOT CRUISE TO THE NEXT LEVEL.

The Timber Cruiser™ has been a mainstay in Forestry System's product offerings since it's creation in 1986. Through years of hard work, dedication, and experience, it has been refined over many years, and has since become the gold standard of timber cruising solutions.

The Timber Cruiser™ was Forestry System's first program, created with the sole purpose of taking timber cruising to the next level. FSI has updated and improved the program over our many years to surpass that goal. We believe there is a better, easier way for a forester to cruise a plot - without the use of tree tape, bulky tablets, a Biltmore Stick, and a heavy vest full of tools.

Housed in a rugged handheld, powered by the Android platform, the Timber Cruiser™ software is the latest and greatest version of our program - grade trees using product types and values, record plot-cruise findings and stand notes, and receive immediate footages in the palm of your hand.

No more bulky vests - the Timber Cruiser™ is the way cruising timber was meant to be. We've been with you in the forest every morning for 38 years... who else would you trust?
